

# Shelter-in-Place for Active Shooter

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**An active shooter is an individual engaged in attempting to kill people in a confined space or populated area. Active shooters typically use firearms and have no pattern to their selection of victims.**

## Take Additional Safety Measures

If you see suspicious activity, let an authority know right away.

When you enter buildings, take the time to identify two exits and look for places where you could hide. Get in the habit of doing this. It will help you to act quickly if you ever need to.

Map out places to hide. In rooms without windows, behind solid doors with

locks, under desks, or behind heavy furniture.

Ask about plans for places you spend a lot of time, including workplaces, houses of worship, and schools.

If you participate in an active shooter drill, talk with your family about what you learned and how to apply it to other locations.

## Run. Hide. Fight.

### Run

**First Officers on scene will not stop to help the injured.** Their priority is to end the incident as fast as possible. Rescue teams will move in after the first officers and will treat and move the injured to safety.

- Get away** That is your top priority!
- Leave** behind any belongings.
- Help** others if you can, but you must escape.
- Warn** others to stay away from the area.
- Call 9-1-1** when you are safe.

### Hide

- Stay out** of the shooter's view.
- Lock and block** entrances and turn off lights.
- Groups of people should **spread out when hiding**.
- Text 9-1-1** and text message others to silently communicate.
- Stay in place** until given the-all-clear signal.

### Silence electronic devices and make sure they don't vibrate.

Devices that buzz or ring will bring attention to places of hiding.

#### If you are in a Manufactured or Mobile Home

#### If you are in a 1- or 2-Story Building

May have an attic and/or basement

#### If you are in a Multistory Building

Includes schools, apartments, and offices

##### For all structures

- stay inside
- lock and block the doors
- close blinds
- turn off all the lights

### Fight as a last resort!

- Commit to your actions.** Fight. Do not hesitate.
- Be prepared** to inflict severe injury to shooter.
- Throw objects** or improvise weapons (staplers, scissors, chairs).

How long to shelter-in-place?

Stay in place until law enforcement gives you notice that the danger is over.

FEMA

Nov. 2021

# Shelter-in-Place for Chemical Hazard

If told not to evacuate or it is too late to evacuate

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**Chemical agents are poisonous vapors, aerosols, liquids and solids that have toxic effects on people, animals or plants.**

## Take Additional Safety Measures

Go inside as quickly as possible. Bring any pets indoors.

Lock all doors and windows for a better seal.

Turn off the air conditioner or furnace, all fans, close the fireplace damper and any other place that air can come in from outside.

Use duct tape and plastic to seal around doors and windows in the room where you take shelter.

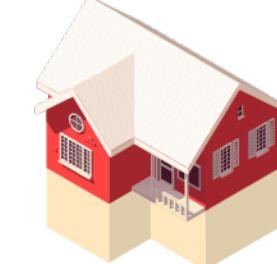

Listen for current emergency information and instructions from authorities.

Do not drink water from the tap. Stored water will be safer.

If you are in a **Manufactured or Mobile Home**

If you are in a **1- or 2-Story Building**  
May have an attic and/or basement

If you are in a **Multistory Building**  
Includes schools, apartments, and offices

For all locations, **stay inside and minimize air flow** by turning off all furnaces, air conditioners, fans, and heaters.

If possible, further reduce exposure to the chemical hazard by using **duct tape and plastic sheeting** to:

- tape the gaps around doors and windows
- cover any vents or recessed fans
- tape over electrical outlets

**Going to an interior room without windows will make it easier to seal the room.**

**Turn off** all fans, furnace or air conditioner.

**Use duct tape and plastic sheeting to seal** around the windows and doors. This will reduce contaminated air coming into the room.

**Going to an interior room without windows** will give you fewer locations to seal.

How long to shelter-in-place?

Sheltering-in-place for a chemical hazard should not last longer than a few hours. Listen to authorities to know when it is safe to leave.

# Shelter-in-Place for Earthquake

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**Earthquakes are the sudden, rapid shaking of the earth, caused by the breaking and shifting of underground rock. Earthquakes can collapse buildings and cause heavy items to fall, resulting in injuries and property damage.**

## Take Additional Safety Measures

### Drop, Cover, and Hold On.

- **Drop** to your hands and knees so you don't fall.
- Take **Cover** under sturdy furniture. If not available, tuck and cover your neck and head with a coat, blanket, cushion, or your arms.
- **Hold On** to the furniture so you stay covered.
- Crawl only if you can reach better cover without going through an area with more debris.

Expect aftershocks. When they happen, **Drop, Cover, and Hold On** again.

If you are in a high-rise building, expect fire alarms and sprinklers to go off. DO NOT use elevators.

Act now to secure TVs, shelves and other heavy furniture.

### If you are in a Manufactured or Mobile Home

If you are in a **1- or 2-Story Building**  
May have an attic and/or basement

If you are in a **Multistory Building**  
Includes schools, apartments, and offices

How long to shelter-in-place?

Stay in the **Drop, Cover, and Hold On** position until shaking stops.

After the shaking stops:

- If in a damaged building, go outside and move away from the building.
- If trapped, send a text or bang on a pipe or wall instead of shouting.
- If in an area at risk of tsunami, move inland.

For all structures, stay where you are and **Drop, Cover, and Hold On.**

FEMA

Nov. 2021

# Shelter-in-Place for Flooding/Flash Flooding

If told not to evacuate or it is too late to evacuate

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**Flooding is the most common natural disaster in the United States. Floods may develop slowly or quickly without warning. Flash flooding is due to an extreme volume of water in a short period caused by heavy rainfall, a levee or dam failure, or a sudden release of water by a debris or ice jam.**

## Take Additional Safety Measures

Go inside as quickly as possible. Bring any pets indoors.

If told to evacuate, do so immediately.

- Do not drive around barricades.
- Stay off bridges over fast moving water. Turn around. Don't drown®
- If your vehicle is trapped in rapidly moving water, stay

inside. If water is rising inside the vehicle, get on the roof and call 911.

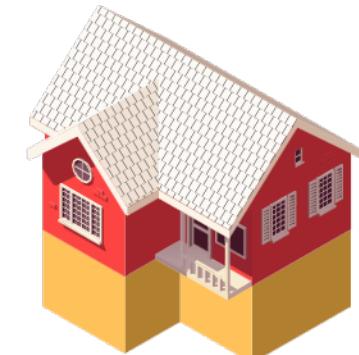

Use a generator or other gasoline-powered machinery ONLY outdoors and 20 feet from the house and away from windows.

Listen for current emergency information and instructions.

If you are in a  
**Manufactured or  
Mobile Home**

If you are in a  
**1- or 2-Story Building**  
May have an attic and/or basement

If you are in a  
**Multistory Building**  
Includes schools, apartments, and offices

How long to shelter-in-place?

If you are safe, stay inside until local authorities provide other instructions.

If you are in danger call 911.

For all structures:

If the floodwaters rise to a dangerous level:

- Go to the highest level of the building or onto the roof if necessary.
- Do not climb into a closed attic—you may become trapped by rising flood water.
- Call 911.

Take your **go-bag** and critical documents with you.

# Shelter-in-Place for Hurricane (High Wind, Flooding and Storm Surge)

If told not to evacuate or it is too late to evacuate

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**Hurricanes are massive storm systems that form over warm ocean waters and move toward land. Threats from hurricanes include powerful winds, heavy rainfall, storm surges, coastal and inland flooding, rip currents, tornadoes, and landslides.**

## Take Additional Safety Measures

If floodwaters rise to a dangerous level, go to the highest level of the building.

Do not climb into a closed attic—you may become trapped by rising flood water.

Go inside as quickly as possible. Bring any pets indoors.

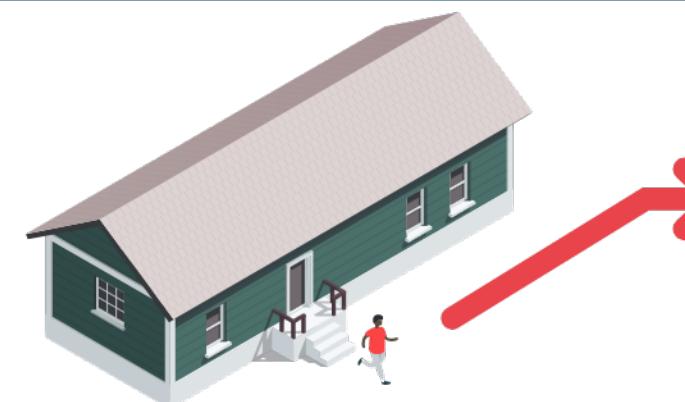

Use a generator or other gasoline-powered machinery

ONLY outdoors and 20 feet from the house and away from windows.

Save phone calls for emergencies. Use text messages or social media to communicate.

Listen for current emergency information and instructions.

## If you are in a Manufactured or Mobile Home

**Get out!** Go to the nearest shelter. Manufactured structures such as mobile homes are unsafe during a hurricane.

**Do not** walk, swim, or drive through flood waters.

Take your **go-bag** and critical documents with you.

**Do not** shelter-in-place

Leave immediately. Go to the nearest shelter location.

**How long to shelter-in-place?**

Stay inside until local authorities provide other instructions.

## If you are in a 1- or 2-Story Building

May have an attic and/or basement

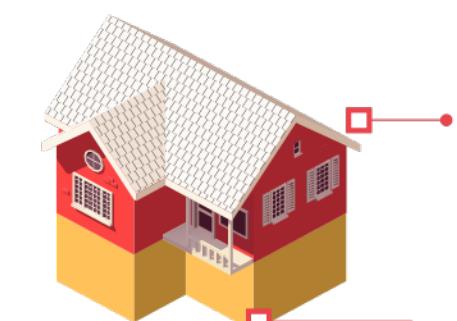

## If you are in a Multistory Building

Includes schools, apartments, and offices

For both structures

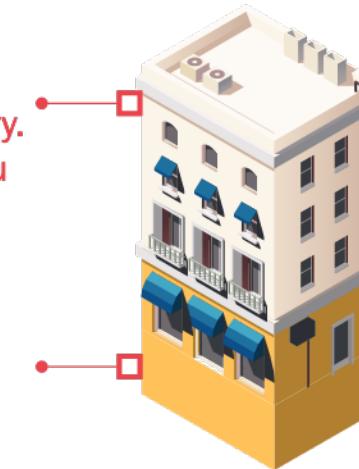

Take your **go-bag** and critical documents with you.

### For flood or storm surge danger:

- Go to the highest level of the building or onto the roof if necessary.
- Do not climb into a closed attic—you may become trapped by rising flood water.
- Call 911.

- For high wind:** Go to a small, interior, windowless room in a sturdy building on the lowest level.

If told to evacuate, do so immediately.

**Do not** drive around barricades. Stay off bridges over fast-moving water. Turn Around, Don't Drown®

**FEMA**

Nov. 2021

# Shelter-in-Place for Nuclear Detonation

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**Nuclear explosions include an intensely bright flash, a blast wave, and radioactive fallout (the dirt mixed with radioactive material that falls to the earth after the explosion). Radioactive fallout generally begins to collect about 10 minutes after the explosion. This gives you time to find adequate shelter.**

## Get In. Stay In. Tune In.

Get inside the nearest building to protect yourself from radiation. Brick or concrete are best. Bring any pets indoors.

Go to the basement or middle of the building. Stay away from the outer walls and roof because radioactive material will collect there.

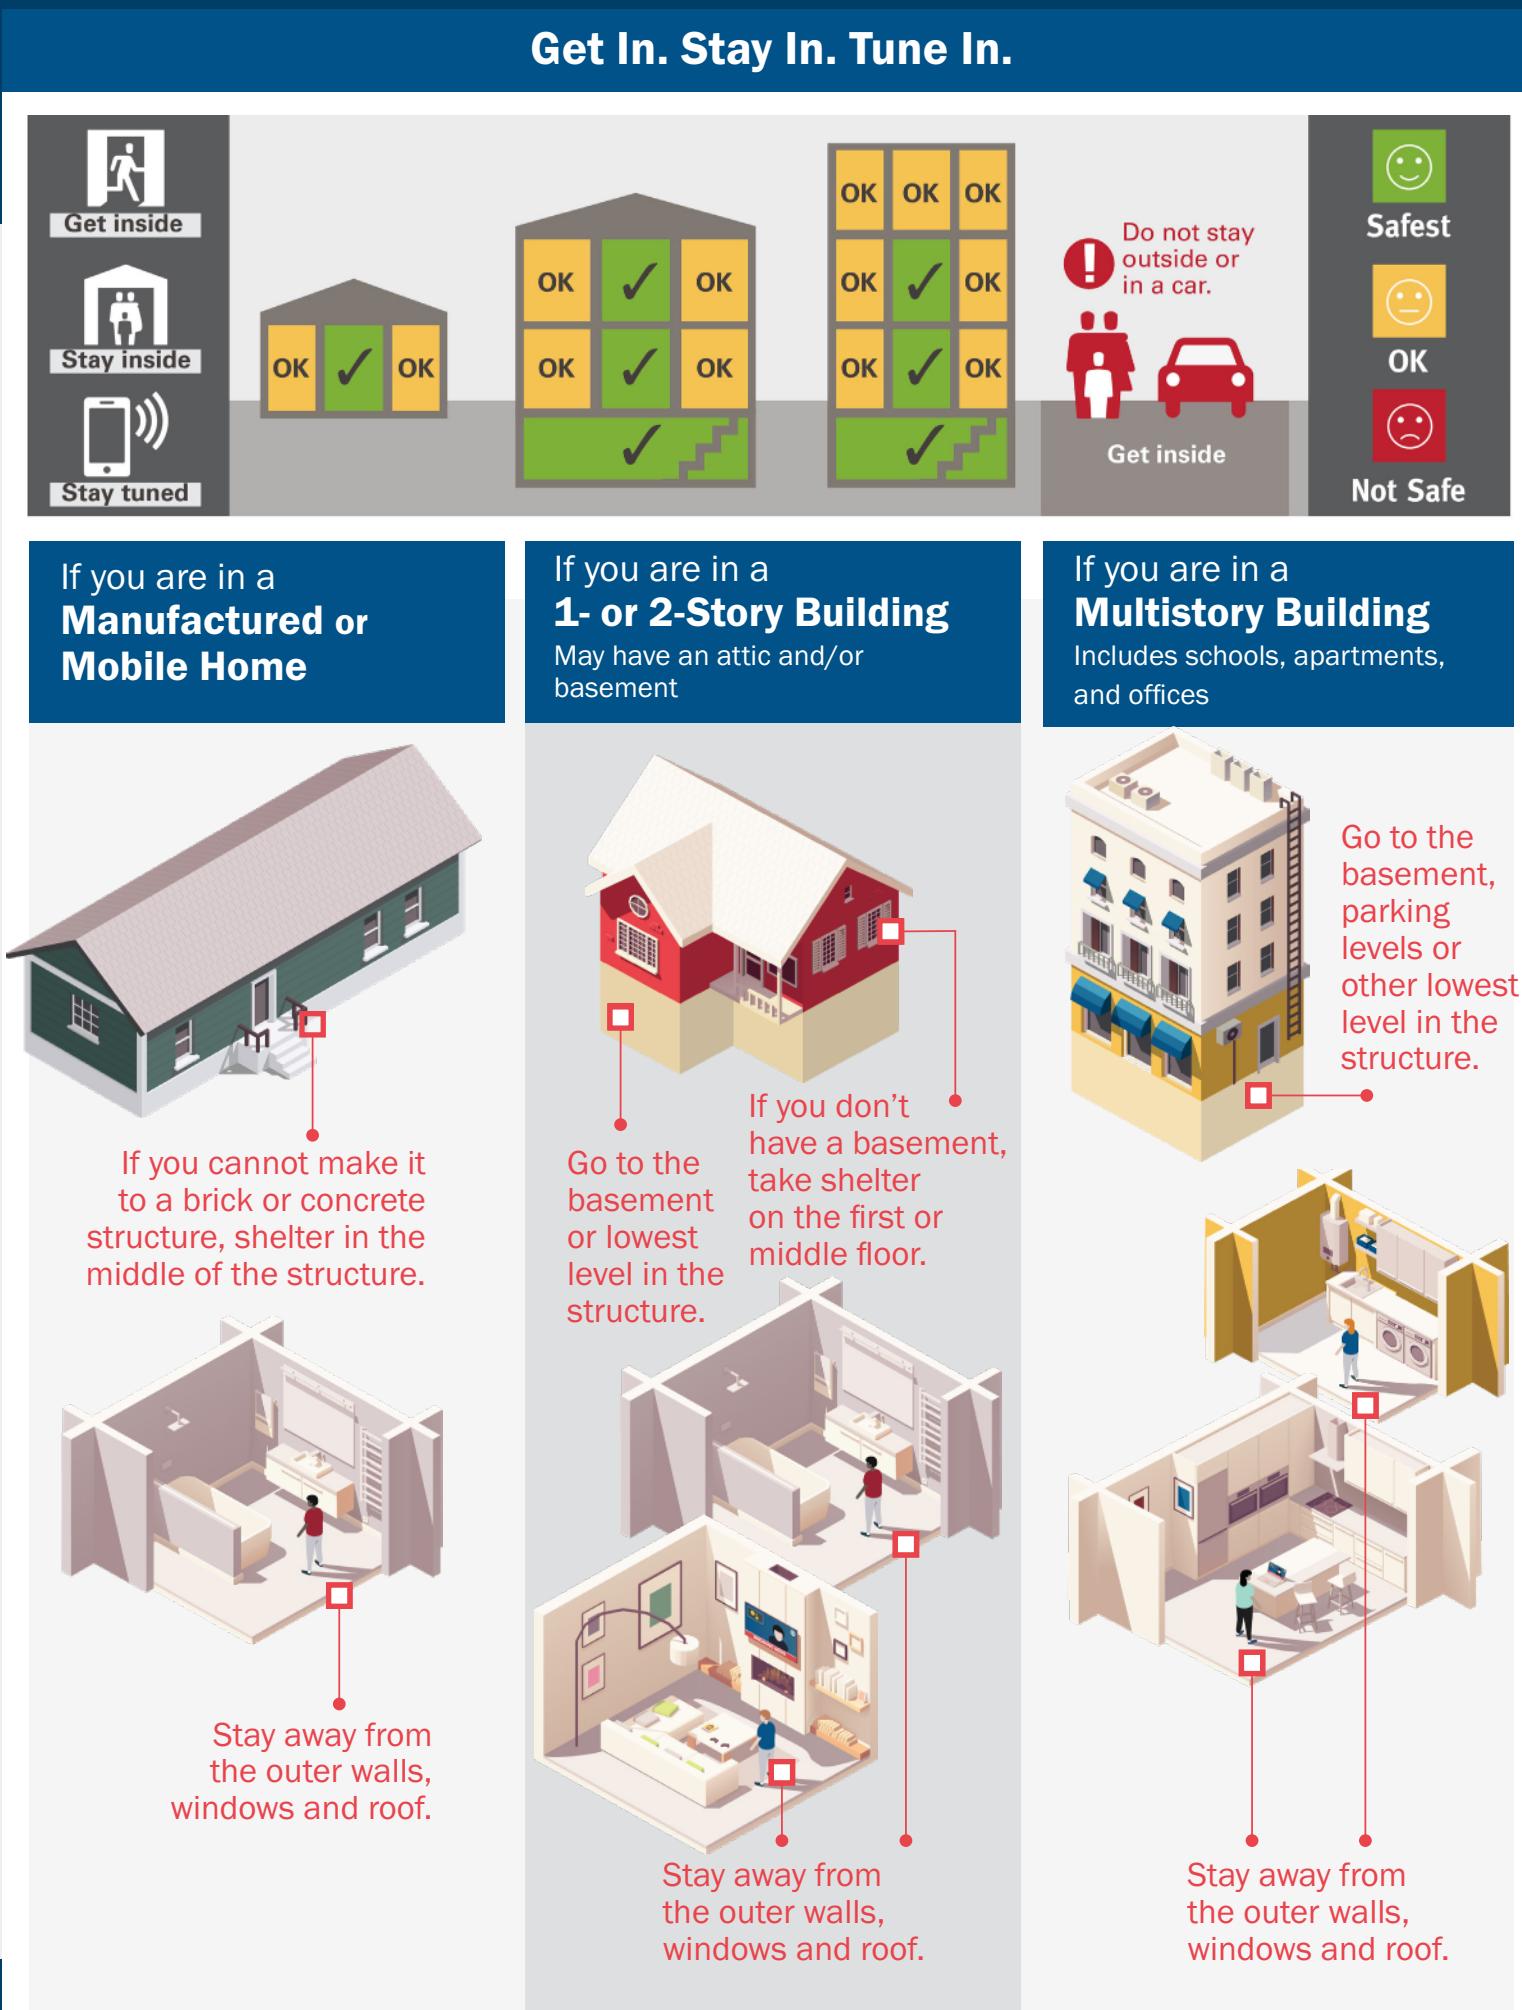

## Take Additional Safety Measures

If you were outside after the fallout arrived, remove your outer layer of clothing and put it away from people and pets. Brush off any fallout and, if possible, wash exposed skin and hair.

Close windows and doors. If possible, turn off units that bring in air from the outside.

Stay inside for 24 hours unless local authorities provide other instructions. It is important to wait for the radiation to decay.

Listen for instructions from authorities.

How long to shelter-in-place?

Stay inside for 24 hours unless authorities provide other instructions, or your building is threatened by fire or collapse. This will protect you from radioactive fallout.

Tune into any communication channel or media available for official information on when it is safe to exit and where you should go. when it is safe to exit and where you should go.

FEMA

Nov. 2021

# Shelter-in-Place for Pandemic

When disaster strikes, it may be safer to stay in your home, place of employment, or other location. Learn where to go, what to do, and how long you should shelter-in-place for the hazards in your area.

**A pandemic is a disease outbreak that spans several countries and affects a large number of people. Pandemics are most often caused by viruses that can spread easily from person to person. Most people will not be immune and a vaccine may not exist right away.**

## Take Additional Safety Measures

Stay at home as much as possible and stay away from others that are sick.

Wash hands frequently with soap and water for 20 seconds. Hand sanitizer with 60% alcohol may be used if soap and water is not available.

Wear a mask when you are out of the home, caring for someone who is sick, or if you are around others when you are sick.

Practice good health habits. Get plenty of sleep, be physically active, manage your stress, drink plenty of fluids, and eat nutritious food.

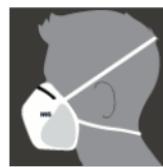

Keep physical distance from others. Practice keeping at least 6 feet apart. Limit close, face-to-face contact with others.

Listen for current emergency information and instructions.

## Cover your mouth and nose with a mask when in public.

Follow CDC Guidelines.

Face masks protect the wearer and others by reducing the spread of a virus.

**N95 Mask**

- Tight fitting
- Filters at least 95% of large and small airborne particles
- Disposable

**Surgical Mask**

- Looser fitting
- Contains large droplets
- Disposable

**Cloth Face Covering**

- Looser fitting
- Two layers contain large droplets
- Reusable with washing

If you are in a  
**Manufactured or Mobile Home**

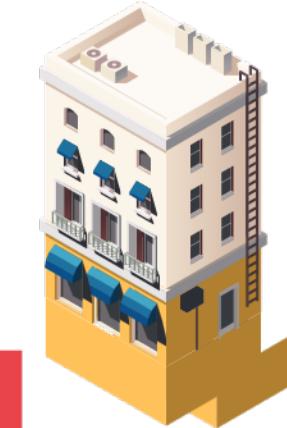

If you are in a  
**1- or 2-Story Building**

May have an attic and/or basement

If you are in a  
**Multistory Building**

Includes schools, apartments, and offices

## What to do

**Minimize trips** outside to only essential requirements, e.g. buy two weeks of food at a time.

**Create** an emergency plan so that you and your family know what to do and what you will need in case an outbreak happens. Consider how a pandemic may affect your plans for other emergencies.

**Gather supplies** in case you need to stay home for several days or weeks. Supplies may include cleaning supplies, non-perishable foods, prescriptions, and bottled water. Buy supplies slowly to ensure that everyone has the opportunity to buy what they need. Remember that not everyone can afford to stock up immediately. Consider avoiding WIC-labeled products so that those who rely on these products can access them.

## Quarantine vs. Isolation

**All people** should shelter in place as much as possible

**Quarantine** separates and restricts the movement of people who were exposed to a contagious disease to see if they become sick.

**Isolation** separates sick people with a contagious disease from people who are not sick.

How long to shelter-in-place?

If you believe you've been exposed to the disease, contact your doctor, follow the quarantine instructions from medical providers, and monitor your symptoms.

If you're experiencing a medical emergency, call 9-1-1 and shelter in place with a mask, if possible, until help arrives.

**FEMA**
